ALFA FORNI

What **kitchen** do you work in? Alfa has an oven for your every need

Alfa Pro is the first manufacturer of CompactFlame pizza ovens. The best commercial pizza ovens for outdoors, kitchens, show-cooking and food trucks. Alfa Pro has pioneered the world of rapid cooking pizza ovens. The CompactFlame technology ensures the greatest output for your restaurant. Compact dimensions and performance are the keys to this new line of commercial pizza ovens for professional kitchens.

Food truck

The lightest wood fired oven for your moving business.

Outdoor

Stone hearth oven suitable anywhere for your restaurant activities.

Kitchen

The compact wood fired oven for your kitchen.

Show cooking

Compact traditional pizza ovens for front-cooking.

ALFA FORNI

Commercial ovens

Best for restaurants and pizzerias

We believe that combining the knowledge of tradition and innovation, with the best selected materials, working with the best new technologies available is the key to offering a true pizza OVEN.

Dedication to Quality: commitment to quality, the best selected materials, working with the best new technologies available and with high-profile skilled workers.

ELECTRIC Line

It needs no chimney, unless expressly required by local laws, and it can neutralise bad smells with a simple odour eliminator.

HYBRID Line

Thanks to the Forninox technology that combines strong stainless steel AISI 304 and refractory tiles, the ovens are light, movable and reach working temperatures in just 30 minutes.

TRADITIONAL Line

The Napoli is a ready-to-use oven that comes in a wide range of customisable mosaic patterns. Napoli is a wood or gas-fired brick static oven.

It's entirely handmade with respect to the purest Italian tradition by using high-quality raw materials that certainly make it the best oven for every pizzeria.

TECHNOLOGY AT THE SERVICE OF CATERING

HYBRID Line

Alfa Pro commercial ovens are the only cooking appliances of their kind that do not require building works for installation. Thanks to the Forninox technology that combines strong stainless steel AISI 304 and refractory tiles, the ovens are light, movable and reach working temperatures in just 30 minutes. Powered with gas, wood or in a dual fuel version these devices make for perfect and efficient baking results.

ALFA FORNI

Flue System Patent

Alfa Forni's research and development department patented its **Flue System™ technology** in 2019. A **smoke extraction system that improves the circulation of hot air inside the cooking chamber**, increasing the oven's thermal efficiency.

This patented design helps Alfa Forni use all the heat available, while others lose it.

The heat of the fumes is recovered by **regulating air flows.**

Fume conveyors.

Before the natural outflow, **the hot fumes continue to heat** the oven vault and cooking surface.

5 cm thick refractory tiles produced at Alfa by specialised artisan.

The walls do not overheat thanks to the **double layer of ceramic fibre** that completely insulates the oven. Resistant up to 1200°C.

Alfa Forni- Flue System

DESIGN & PERFORMANCE

The perfect combination: Forninox technology

The innovation of Forninox™ technology consists in **combining the excellent physical and thermal properties of steel with those of refractory brick**, the material used to build professional ovens.

The **steel structure** ensures adequate resistance to the thermal and mechanical stress caused by the high temperatures reached by the oven.

Insulating the dome with two layers of ceramic fibre instead allows the temperature to be raised very quickly and held for longer, gradually releasing the heat and achieving optimal cooking.

DESIGN & PERFORMANCE

Design and innovation in a single oven

Our Made in Italy design is the result of constant research.

The goal that has driven our R&D department for years is to offer the best possible performance, turning the use of the oven into a unique experience.

A powerful combination of form and authenticity.

Tradition: refractory brick

Alfa's domestic wood-fired ovens are still built by the skilled hands of **artisans who specialise in working with refractory brick.**

Innovation: steel to protect the fire

Alfa's real innovation is the **stainless steel vault** insulated with ceramic fibre to **maintain the heat** inside the cooking chamber.

ALFA FORNI

ELECTRIC Line

Zeno is a Neapolitan electric oven that reaches a temperature of 500°C. It needs no chimney, unless expressly required by local laws, and it can neutralise bad smells with a simple odour eliminator.

It attains temperatures as high as a real wood-fired oven, which makes it perfect for countries where it is very complicated to get authorised to burn firewood.

The exposed heating elements of the dome allow a rapid heating of the oven floor as well. By virtue of Alfa Forni's high-density refractory bricks, the heat is retained much longer than in competing products, resulting in a drastic reduction in power consumption.

ALFA FORNI

Zeno

Thanks to the continuous research during the development stage of the Zeno oven, Alfa Forni has come up with the idea of keeping the control panel in the upper part to get the oven separate from the base. This feature allows you to choose whether to use the appliance without its base for greater ease of installation or to use it in all its glory as a compact and complete oven.

Napoli

The Napoli is a ready-to-use oven that comes in a wide range of customisable mosaic patterns.

- Dome and external hood made of hand-shaped bricks.
- External coating customisable on demand.
- Removable supporting stand in reinforced iron.
- Oven floor made of Alfa's "cotto" firebricks.
- Crown in Alfa's firebricks.
- Cast-iron arch designed by Alfa.
- 2 cm (0,8 in) thick lava stone landing.
- Wood or gas.

details

Cooking floor Napoli

This handcrafted, commercial oven was designed and manufactured by using "cotto" firebricks produced by Alfa in its Anagni kiln, near Rome.
